

CONCEALMENT SOLUTIONS

FOR ALL THINGS FASTENING.

Blending Technology with Everyday Surroundings

Industry leaders need the cutting-edge designs in concealment.

The Raptor Radome is the newest Allfasteners innovation created with pride for the industry.

- Easy Latch Access
- Locking System for Security

- Hinge System Allows for 360 Degree Access to Contents
- Steel Structure & Concealment Panels are Fabricated to Any Project Specifications
- Fabricated in USA

- Custom Shipping Crate Built for Every Raptor Radome Order to Ensure Safe Delivery

**CONCEALMENT
SOLUTIONS****FOR ALL THINGS FASTENING.****THE RAPTOR
RADOME**

This systematized and simple approach addresses a challenge the tower industry has faced for many years. Installing and removing loose bolts, straps, and buckles, as well as handling panels at heights is a painstaking operation that has proved to be a slow and cumbersome process. Coupled with the fact that the necessary hardware and nylon bolts are often found to be missing or damaged, it leaves concealment panels susceptible to blowing open or even coming off the pole in a wind storm.

The Raptor Radome offers an easy latch system that allows each hinged panel to open simultaneously for 360° access to the antennas and equipment mounted inside. Available in a broad range of diameters, the versatility of the Raptor Radome is proven by the fact it can even be installed as a retrofit option on existing bulkheads without the need for custom fabricated components to be added to the pole.

This long awaited industry solution makes equipment access easy again, and guarantees the longevity of the concealment. Let the Raptor Radome take your concealment pole to new heights safely.
