

CERTIFICATIONS & APPROVALS

CERTIFIED NSF/ANSI 61

Allfasteners is proud to announce that we carry select **NSF/ANSI 61 Certified products** and stand by their quality.

What is NSF and what does it mean to be NSF/ANSI certified?

NSF, National Sanitation Foundation, is a non-profit organization founded in 1944, whose goal was to create standards in order to promote public health. NSF/ANSI Standard 61 (NSF-61) is a set of national standards that relates to water treatment and establishes stringent requirements for the control of equipment that comes in contact with either potable water or products that support the production of potable water.

NSF-61 was developed by the National Sanitation Foundation (NSF), a global independent public health and environmental organization, and the American National Standards Institute (ANSI), which oversees the consensus for developing standards for manufacturing and procedures in the United States

What kind of tests are done during the NSF certification process?

NSF/ANSI/CAN 61 testing covers all products with drinking water contact from source to tap, and determines what contaminants may migrate or leach from your product into drinking water. It also confirms if they are below the maximum levels allowed to be considered safe.

Which AF Products are NSF/ANSI 61?

EF500+ High-Preforming Structural Adhesive Injection

Certified NSF/ANSI 61

VF200PRO Fast-Curing Adhesive Injection

Certified NSF/ANSI 61

NEW PRODUCT
